

GOAT Network Integrates into Artemis Finance with gART Point System

Artemis Finance is thrilled to announce that GOAT Network has been integrated into it marking another milestone in our journey toward decentralized sequencing and enhanced liquidity. GOAT Network is the first sustainable BTC yield chain. This integration marks a major step toward making BTC and DOGE yield-generation more accessible, utilizing Artemis' decentralized sequencing technology.

Alongside this integration, we are introducing the gART Point System, a new points mechanism designed to complement our existing Art-Point System while maintaining the same logic and rewarding users for their participation.

Key Highlights of the Integration:

- BTC-Powered DeFi: GOAT Network will leverage Artemis' decentralized sequencer to enable yield-bearing BTC transactions.
- New Point System: The gART Point System will reward users participating in GOAT-powered staking and transactions, alongside the existing Art-Point System.
- BTC as Gas: GOAT Network enables BTC to be used as a gas token, with transaction revenue shared with its decentralized sequencer operators.
- Real BTC Yield: Users staking BTC or DOGE into a GOAT sequencer will earn sustainable BTC rewards, not volatile native tokens.

Why This Matters:
The collaboration between GOAT Network and Artemis unlocks new opportunities for institutions and individuals to generate BTC yield passively, reinforcing Bitcoin's role in DeFi while aligning with GOAT's mission of Bitcoin for Social Good.

Supported Assets on Goat Network

Artemis will support liquidity and decentralized sequencing for:

- goatBTC (BTC on GOAT Network)
- goatBTCB (BTCB on GOAT Network)
- goatDOGEB (DOGEB on GOAT Network)

These assets will play a crucial role in expanding Artemis' reach while enabling users to maximize rewards through our sequencer and liquidity programs.

The gART Point System Explained

The gART Point System is a fresh rewards model specific to GOAT Network, running in parallel with our existing Art-Point System. While the two systems operate independently, they share the same underlying mechanics, ensuring seamless integration and fair reward distribution.

Participants in the Artemis ecosystem on GOAT Network can now accumulate gART Points.

You can earn gART Points by depositing BTC/BTCB/DOGEB into Artemis Finance and receiving goatBTC/goatBTCB/goatDOGEB in return, which represents your locked position on Artemis, and holding 1 goatBTC/goatBTCB/goatDOGEB per day will grant you 1 gART Point.

To encourage early supporters, we are providing more gART Points as incentives during the early birds period.

Your daily gART Point earnings are determined by your gART Point Base multiplied by your Boost.

gART Point Base is calculated based on your goatBTC/goatBTCB/goatDOGEB holdings and the goatBTC/goatBTCB/goatDOGEB holdings of your referrals.

Boost is acquired through participating in Artemis D-Sequencer Tournaments. You can increase your boost by meeting specific criteria in each tournament and earn more rewards.

gART Points Calculation

- Daily Total gART Points = gART Point Base * (1 + gART Point Boost)
- gART Point Base = goatBTC/goatBTCB/goatDOGEB amount + 20% referral's goatBTC/goatBTCB/goatDOGEB amount + 10% referrals' referrals goatBTC/goatBTCB/goatDOGEB amount
- gART Point Boost = ePENDLE Boost + vlEQB Boost + Guild Boost
- Total gART Points = Daily Total gART Points

Tournaments

Tournament 1. Referral Wheel

Accumulate gART Point Base by referring members who join the tournaments and hold goatBTC/goatBTCB/goatDOGEB.

Through the referral scheme, you can:

- Add 20% of your referrals' goatBTC/goatBTCB/goatDOGEB holdings to your gART Point Base.
- Add an additional 10% for the referrals of your referrals.

Tournament 2. vlEQB and ePENDLE Run

- vlEQB is the vote-locked version of Equilibria Finance's governance token EQB and can be used for gauge voting on Equilibria. Holding vlEQB will give you a maximum boost of 1x.
  Boost_vlEQB = min{[Your vlEQB/Total vlEQB (vlEQB paired with goatBTC/goatBTCB/goatDOGEB)] / [Your goatBTC/goatBTCB/goatDOGEB/Total goatBTC/goatBTCB/goatDOGEB] * 1, 1}
- ePENDLE is the liquid version of vePENDLE tokens and can be obtained through PENDLE conversion or swapping via DEXes. Holding ePENDLE will provide a maximum boost of 0.5x.
  Boost_ePENDLE = min{[Your ePENDLE/Total ePENDLE (ePENDLE paired with goatBTC/goatBTCB/goatDOGEB)] / [Your goatBTC/goatBTCB/goatDOGEB/Total goatBTC/goatBTCB/goatDOGEB] * 0.5, 0.5}

Example:

- Total vlEQB paired with goatBTC/goatBTCB/goatDOGEB: 100,000

- Total ePENDLE paired with goatBTC/goatBTCB/goatDOGEB: 10,000

Tournament 3. Guild War

Create a guild by generating a referral code and inviting members to join. Each guild will be ranked based on the total sum of the guild members' gART Point earnings every week. Only two tiers of referrals will be considered.

Every week, the top 6 guilds will receive additional Boost. Please note that Boost_guild will be reset every week.

Seize the opportunity to earn fantastic rewards with the gART Point System.

Tweet

🚀 GOAT Network is now integrated with Artemis Finance!

This marks a major step in BTC-powered DeFi, enabling sustainable Bitcoin yield and decentralized sequencing. With BTC as Gas, transactions on GOAT Network will be powered by BTC, with revenue shared among sequencer operators.

Users can stake BTC or DOGE to earn sustainable BTC rewards.

To celebrate this integration, we're introducing the gART Point System, a new rewards mechanism running alongside the Art-Point System.

Users earn gART Points by depositing BTC/BTCB/DOGEB into Artemis Finance and holding goatBTC/goatBTCB/goatDOGEB.

Join now to maximize your rewards and be part of the next phase of decentralized sequencing and BTC-powered DeFi.
